The Soil Conservation Service projects its work onto the land largely through the instrumentality of these soil conservation districts, by assisting them in the development and execution of plans for needed land-use reforms.

DEMONSTRATION PROJECTS

# DEMONSTRATION PROJECTS

2

Large-scale demonstration projects, averaging about 25,000 acres in size, are operated by the Service as a means of spreading conservation practices among land users. On each project, farmers are invited to cooperate with the Service in formulating and carrying out a complete program of soil conservation. Such a program involves treatment of the farm as a whole with such measures as may be adaptable to each component parcel of land.

# LAND UTILIZATION PROJECTS

4

Judicious purchases of sub-marginal land not only relieve distressed people but make possible the rearrangement of ownership patterns, enlargement of operating units, and similar social and economic adjustments necessary to conservation and wise use of the land. Worn land taken out of uneconomic cultivation is developed for community pasture, forestry, recreation, wildlife, or other beneficial use.

(Projects involving the purchase, development, or management of lands by the Service under Title III of the Bankhead-Jones Farm Tenant Act. This map does not show projects for which the Service no longer has any responsibility.)

\* Completion of title clearance, for lands already under accepted options, only remaining activity of the Service on this project.

\*\* Approved project but no land purchase or other activity initiated.

In selected semi-arid areas of the seventeen western states, the Service, in cooperation with other Departmental agencies, assists farmers and ranchers in the installation of small water facilities. Through such facilities, the opportunity for sounder use of the land is greatly broadened.

Large-scale, integrated planning and operations on a watershed basis have been major basic premises for the erosion control and land-management program in Western States. Plans are developed and surveys are made in cooperation with State and Federal agencies having jurisdiction over the administration of the public lands, following which operations are undertaken by the Service on the intermingled private lands in cooperation with the land owners.
